

Trenton Sadrakula

Software Engineer

📄 SUMMARY

Software engineer proficient in many platforms, languages, and systems. Heavily focused on bringing my skills and knowledge to a tech company while constantly perfecting my craft. Keen interest in learning and becoming the best I can be.

📁 Projects

Storage Essentials Plugin - A plugin built for WordPress users. This plugin is built in PHP and connects to the Storage Essentials API. It is used for the modern storage site to easily rent, reserve, and organize their units in one easy place. It is built to work with the Secur Theme that utilizes the unit data to show on the front end.

Quote Generator - A front-end application that fetches a simple request from an API and displays the quote and author of the quote. It utilizes async functions on the fetch and was built in Reactjs.

FluidPay Integration - A backend web application that accesses information sent via a webhook then posts to another DB. This application is built in Express, Node, and utilized Mongoose and MongoDB for initial DB testing.

Other Projects: CosmoDrome

📁 Work

Software Engineer - Go Local Interactive

January 2023 — Present

- Maintained over 80 storage sites written in PHP
- Worked on Vue2 and React apps
